

The Workshop on “DecoChrom Printed Electronics” reaches out to designers and practitioners interested in exploring calm displays suitable for “always on” information presentation. Electrochromic ink is one such way of creating non-light emitting, low-power consumption, free form, calm displays. In this workshop, we will demonstrate the creation of a printed electrochromic display, and give insights into the various printing and assembly techniques. We discuss the design challenges and applications of printed displays.

To ensure a good experience of the prototyping process the maximum capacity of this workshop is 20 participants. To indicate your interest, please send an e-mail to [heiko.muller@ulapland.fi](mailto:heiko.muller@ulapland.fi).
